

- Tools that we are mainly going to be using with my group:
 - Trello
 - Github
- Package manager will be using in this course: NPM
- What is a bundler?
 - Is a tool that puts together **all the JavaScript code** into **one single file**.
 - This single JavaScript file will be ready for production and can be executed in the browser.
 - The most widely used bundler is Webpack.
- **Question: If Webpack is the most widely used bundler, why are using Snowpack?**
-
